Programme Learning Outcome MATRIX

Please fill the programme learning outcome matrix.

How to fill the PLO matrix:

1. Identify the learning outcomes (LO) for each module taking into account that:
 - a. Not all the LO must be in all the modules
 - b. PLOs must be different between Bachelor and Master Science Modules
2. A list of PLO for bachelor and master Degree programmes are in the next section in the tables:
 - a. EUR-ACE Programme Learning Outcomes for Bachelor Degree Programmes
 - b. EUR-ACE Programme Learning Outcomes for Master Degree Programmes

MODULES	Ba_PLO1	Ba_PLO2	Ba_PLO3	Ba_PLO4	...	Ba_PLOX
	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Add as you want
Internal Combustion Engine Principle						
Internal Combustion Engine Design						
Fundamentals of Combustion						

MODULES	MSc_PLO1	MSc_PLO2	MSc_PLO3	MSc_PLO4	...	MSc_PLOX
	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Please choose the PLO among those in the list in next section	Add as you want
Performance Simulation and Application of ICE						
Simulation of ICE Combustion and Emission forming process						
Simulation of Complicated Flow and Heat Transfer

Programme Learning Outcomes:

Programme learning outcomes describe the knowledge, understanding, skills and abilities that an accredited engineering SP must enable a graduate to demonstrate.

They are described separately for both Bachelor and Master Degree programmes with reference to the following eight learning areas:

1. Knowledge and understanding;

Ability to apply knowledge and understanding of mathematics, sciences and engineering disciplines underlying specialisation to solve / design / investigate / conduct complex engineering problems / products, processes and systems / issues / activities.

2. Engineering Analysis;

Ability to analyse and solve complex engineering problems.

3. Engineering Design;

Ability to design complex engineering products (devices, artefacts, etc.), processes and systems.

4. Investigations;

Ability to investigate complex engineering issues.

5. Engineering Practice;

Ability to use and apply practical knowledge and understanding to solve / design / investigate / conduct complex engineering problems / products, processes and systems / issues / activities

6. Making Judgements;

Ability to manage complex and multidisciplinary work contexts and to take decisions and formulate judgments.

7. Communication and Team-working;

Ability to use diverse methods and tools of communication to communicate clearly and unambiguously with specialist and non-specialist audiences in national and international contexts.

Ability to function effectively in national and international contexts as leader of a team that may be composed of different disciplines and levels.

8. Lifelong Learning.

Ability to engage in independent lifelong learning and to follow developments in science and technology and undertake further studies in new and emerging technologies.

ASIA^XIS

Characteristics of PLOs

Programme learning outcomes should be S.M.A.R.T.:

- **Specific** (PLOs should adequately reflect the context, level, scope and content of the programme)
- **Measurable** (PLOs should be easily understandable and verifiable in terms of what the student has actually achieved at the end of the programme)
- **Achievable** (consistent with the institutional context and the available resources)
- **Relevant** (Only the 'key' learning outcomes should be established at programme level. There are no rules on the ideal number of PLOs. Experience suggests that between 10 and 12 is appropriate)
- **Time-related** (plannable and achievable within the specified workload)

Syllabus

Please provide for each module:

1. the previous syllabus of not enhanced module (in your own language)
2. the original syllabus of enhanced module (in your own language). Please highlight the new and enhanced topics.
3. the ASIAXIS syllabus (provided as an annex) filled with all the info reported in the original syllabus. Please highlight the new and enhanced topics. Please take into account the Program Learning Outcomes selected in the matrix.

P.S: in the following section an example on how to fill the new syllabus

The syllabus must contain information about PLO chosen for the Module.

SÁKEN SEIFÝLLIN
YNIVERSITETI

UNIVERSITÀ
POLITECNICA
DELLE MARCHE

Example on how to fill the new syllabus

Institution	Università Politecnica delle Marche
Module (Title)	Internal Combustion Engines
Hours:	72
Program	Master degree in Mechanical Engineering
Learning outcomes	<p>You should also mention the following three fields, by considering the PLOs chosen in the previous section (PLO Matrix):</p> <ul style="list-style-type: none"> • knowledge and understanding • capacity to apply knowledge and understanding • Transversal skills <p>As an example, I report the syllabus of the master degree course “internal combustion engine”</p> <p>Knowledge and Understanding.</p> <p>The course enables students to acquire advanced knowledge on the thermo-fluid dynamic processes taking place in volumetric internal combustion engines. Topics covered in the course will form the basis for an in-depth knowledge of the architecture and the main components of internal combustion engines. In this way, students enrich their knowledge on energy machines</p> <p>Capacity to apply Knowledge and Understanding.</p> <p>The student will have the ability to undertake the evaluation of the thermal and energy performance of the components of an engine and will be able to choose the engine selection criteria on the basis of the application field. These capabilities will consist in a series of professional skills, such as: 1. ability to organize the modeling and design of an internal combustion engine; 2. ability to assess the engine performance in a given application 3. ability to properly understand the formation mechanisms of the main pollutants in the exhausts of an engine and choose the methodologies for their removal</p>

	<p>Transversal Skills.</p> <p>Since the performance of the engine depend on mechanical, fluid-dynamical, thermal, and environmental choices the course will contribute to the completion of the basic technical training, with contributions from various cultural areas that contribute to the culture and professional role of an engineer. The in depth knowledge of such a machine will allow students to test their ability in integrating their knowledge and interfacing with specialists of different areas</p>
<p>Content</p>	<p><i>Brief historical introduction Internal combustion engines classification Engine design and operating parameters Internal combustion engines operating cycles Air inlet and exhaust processes in two- and four-strokes cycle engines Supercharging and turbocharging Ignition plants Fuel metering in spark- and compression-ignited engines Combustion in spark- and compression ignited engines Pollutants formation and control Engines cooling Friction losses and lubrication</i></p>
<p>Methodology</p>	<p>You should also mention the following section:</p> <ul style="list-style-type: none"> • Learning Evaluation Methods • Learning Evaluation Criteria • Learning Measurement Criteria • Final Mark Allocation Criteria <p>Below an example taken from ICE UnivPM course: Learning Evaluation Methods.</p> <p>The exam procedure consists in an oral examination. At least three main topics addressed in the course will be discussed during the oral. The starting topic is at student's choice</p> <p>Learning Evaluation Criteria.</p> <p>The evaluation consists first in verifying the student's knowledge and understanding of the basic functioning of an internal combustion engine. Then the student will be required to demonstrate his in-depth knowledge on the thermo-fluidodynamic processes taking place both in spark ignited and compression ignited engines with particular attention to gas exchange processes, fuel metering, charge motion in the cylinder, combustion, pollutant formation and pollutant control techniques.</p>

Co-funded by the
Erasmus+ Programme
of the European Union

Erasmus Plus 585849-EPP-1-2017-1-UK-EPPKA2-CBHE-JP

	<p>Learning Measurement Criteria.</p> <p>A thirty-points scale is used for grading, with possible praise</p> <p>Final Mark Allocation Criteria.</p> <p>The outcome of the evaluation is positive if the student proves to have knowledge of all the basic subjects covered in the course. The highest score is achieved by demonstrating in-depth knowledge of the course contents. Praise is given to students who are particularly brilliant in exposure and/or demonstrate particular mastery of the matters treated in the course, being able to analyze topics not explicitly covered or to treat standard topics in alternative ways</p>
<p>Bibliography</p>	
<p>Educational resources</p>	<p>Laboratory facilities... Simulation tools</p>
